

Manganese in Drinking Water

A REPORT FOR THE CITY OF HARRISBURG

We serve more than 6,000 customers an average of 450,000 gallons of water per day. Our water is groundwater that we purchase from another water system. The average manganese concentration in our drinking water is 0.05 mg/l. This concentration is below health advisory levels established by the United States EPA and considered safe to drink.

Additional information regarding manganese in drinking water can be found at the following website:
