

Universal AERA-vator™

Our product delivers results without the extra work of traditional aerification. The patented vibrating design fractures the soil – meaning no cores or plugs to remove.

- Vibrating action loosens the soil all around and underneath each tine.
- Better subsurface aerification due to total fracturing of the soil – no holes are “punched” into the surface.
- No cores or plugs mean less post-aerification cleanup.
- Less disruption to playing surface translates into minimal turf downtime.
- Aerating dry soil reduces expense of pre-irrigating; in fact, the harder the soil, the better the AERA-vator performs.
- Swing-hitch allows easy turns while in use.

Widths: 40, (60) & 80 Inches (available with or without seeder)
